DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, drawn to a suspension assembly having suspension arms that extend forward and rearward of a differential, classified in class 280, subclass 124.134.
- II. Claims 9-13, drawn to a drive train having a drive shafts arranged to the front and rear of the differential, classified in class 180, subclass 375.

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions of provided the suspension arm relation to the differential of Invention I is not specifically required to be on the drive train having particular drive shaft relation as in Invention II.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to Curtis Hamre (Reg. No. 29,165) on August 22, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 3616

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
